

EZ PAY SMART CARD AND TICKET SYSTEM

ABSTRACT OF THE DISCLOSURE

A disclosed smart card includes a processor and memory configured to

5 execute a number of gaming applications, such as a bonus game application, a progressive game application, a voucher application and a payable application, and communicate with a master gaming controller on the gaming machine. Gaming instructions, generated during the execution of one or more of the gaming application on the smart card, may be used to affect game play on the gaming machine. The

10 gaming instructions for various gaming services may be supplied to gaming machines operating in a "stand alone" mode or gaming machine connected to some type of dedicated network. In addition, the smart card may store game components including audio game components and video game components that may be downloaded into a gaming machine and incorporated into a game presentation on the gaming machine.

15 The smart card may be utilized at many different venues including casinos, hotels, bars, restaurants and retail stores.
